Dealer Rep. Signature:

The above equipment and Operator And Parts Manual have been received by me and I have been thoroughly instructed as to care, adjustments, safe operation and applicable warranty policy.

Date:  
Customer / Owner’s Signature:

Remove this Warranty Registration Form from the Operator And Parts Manual. Make two copies of the form. Send original Warranty Registration Form to Farm King. Give one copy to the customer and the dealer will keep one copy.
INTRODUCTION

This Operator And Parts Manual was written to give the owner / operator instructions on the safe operation, maintenance and part identification of the Farm King equipment. READ AND UNDERSTAND THIS OPERATOR AND PARTS MANUAL BEFORE OPERATING YOUR FARM KING EQUIPMENT. If you have any questions, see your Farm King dealer. This manual may illustrate options and accessories not installed on your Farm King equipment.

OWNER’S INFORMATION

Thank you for your decision to purchase a Farm King Rotary Cutter. To ensure maximum performance of your equipment, it is mandatory that you thoroughly study the Operator And Parts Manual and follow the recommendations. Proper operation and maintenance are essential to maximize equipment life and prevent personal injury.

Operate and maintain this equipment in a safe manner and in accordance with all applicable local, state, and federal codes, regulations and/or laws. Follow all on-product labeling and instructions.

Make sure that all personnel have read this Operator and Parts Manual and thoroughly understand safe and correct operating, installation and maintenance procedures.

Farm King is continually working to improve its products. Farm King reserves the right to make any improvements or changes as deemed practical and possible without incurring any responsibility or obligation to make any changes or additions to equipment sold previously.

Although great care has been taken to ensure the accuracy of this publication, Farm King makes no warranty or guarantee of any kind, written or expressed, implied or otherwise with regard to the information contained within this manual. Farm King assumes no responsibility for any errors that may appear in this manual and shall not be liable under any circumstances for incidental, consequential or punitive damages in connection with, or arising from the use of this manual.

Keep this manual available for frequent reference. All new operators or owners must review the manual before using the equipment and annually thereafter. Contact your Farm King Dealer if you need assistance, information, or additional copies of the manual. Visit our website at www.farm-king.com for a complete list of dealers in your area.

The directions left, right, front and rear, as mentioned throughout this manual, are as viewed from the rear of the equipment.

Serial Number Location

Please enter the model and serial number in the space provided for easy reference.

Figure 1

Model Number: ______________________
Serial Number: ______________________

The serial number plate (Item 1) [Figure 1] is located on the inside of the left hitch mounting plate.

Always use your serial number when requesting information or when ordering parts.

Manual Storage

Figure 2

The Operator And Parts Manual and other documents can be stored in the canister (Item 1) [Figure 2] located on the top of the splitter gearbox guard.

Safe Operation Needs A Qualified Operator

Operators must have instructions before operating the machine. Untrained operators can cause injury or death.

For an operator to be qualified, he or she must not use drugs or alcoholic drinks which impair alertness or coordination while working. An operator who is taking prescription drugs must get medical advice to determine if he or she can safely operate a machine and the equipment.

A Qualified Operator Must Do The Following:

Understand the Written Instructions, Rules and Regulations

- The written instructions from Farm King include the Warranty Registration, Dealer Inspection Report, Operator And Parts Manual and machine signs (decals).

- Check the rules and regulations at your location. The rules may include an employer's work safety requirements. Regulations may apply to local driving requirements or use of a Slow Moving Vehicle (SMV) emblem. Regulations may identify a hazard such as a utility line.

Have Training with Actual Operation

- Operator training must consist of a demonstration and verbal instruction. This training is given by the machine owner prior to operation.

- The new operator must start in an area without bystanders and use all the controls until he or she can operate the machine safely under all conditions of the work area. Always fasten seat belt before operating.

Know the Work Conditions

- Clear working area of all bystanders, especially small children and all obstacles that might be hooked or snagged, causing injury or damage.

- Know the location of any overhead or underground power lines. Call local utilities and have all underground power lines marked prior to operation.

- Wear tight fitting clothing. Always wear safety glasses when doing maintenance or service.
SAFETY INSTRUCTIONS (CONT’D)

Use Safety Rules

- Read and follow instructions in this manual and the tractor’s Operators Manual before operating.
- Under no circumstances should young children be allowed to work with this equipment.
- This equipment is dangerous to children and persons unfamiliar with its operation.
- If the elderly are assisting with work, their physical limitations need to be recognized and accommodated.
- Stay clear of overhead power lines when lowering or raising the wings. Electrocution can occur without direct contact.
- Check for overhead and / or underground lines before operating equipment (if applicable).
- In addition to the design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment.
- Check that the equipment is securely fastened to the tractor / towing vehicle.
- Make sure all the machine controls are in the NEUTRAL position before starting the machine.
- Operate the equipment only from the operator’s position.
- Operate the equipment according to the Operator And Parts Manual.
- When learning to operate the equipment, do it at a slow rate in an area clear of bystanders, especially small children.
- DO NOT permit personnel to be in the work area when operating the equipment.
- The equipment must be used ONLY on approved tractors / transport vehicles.
- DO NOT modify the equipment in any way. Unauthorized modification may impair the function and / or safety and could affect the life of the equipment.
- DO NOT make any adjustments or repairs on the equipment while the machine is running.
- Keep shields and guards in place. Replace if damaged.
- Operate only with tractor equipped with ROPS (Roll Over Protective System) and seatbelts.
- DO NOT drive into or out of a ditch or on a steep incline with wings in raised position.
- Decrease speed when turning, be careful on slopes or uneven terrain with wings in raised position.
- DO NOT operate rotary cutter in poor visibility conditions such as fog, darkness, or any conditions that limit clear visibility less than 300 feet (100 m) in front of and to the sides of the rotary cutter.
- When conditions make it necessary to slow ground speed, shift to a lower gear rather than reducing engine speed. The engine will maintain rated speed and keep cutter running at optimum cutting speed.
- DO NOT operate in a work area that has not been inspected for foreign debris and obstacles.
- Remove any foreign objects and clearly mark any objects that cannot be removed.

Transport Safety

- Do not exceed 20 mph (32 kph). Reduce speed on rough roads and surfaces.
- Comply with state and local laws governing highway safety and movement of machinery on public roads.
- The use of flashing amber lights is acceptable in most localities. However, some localities prohibit their use. Local laws should be checked for all highway lighting and marking requirements.
- Always install transport locks, pins or brackets before transporting (if applicable).
- Always yield to oncoming traffic in all situations and move to the side of the road so any following traffic may pass.
- Always enter curves or drive up or down hills at a low speed and at a gradual steering angle.
- Never allow riders on either tractor or equipment.
- Keep tractor / towing vehicle in a lower gear at all times when traveling down steep grades.
- Maintain proper brake settings at all times (if equipped).
- Stay away from overhead power lines when lowering or raising the wings. Electrocution can occur without direct contact.
Safety Rules For Power Take-Off (PTO) Driven Equipment

- Keep PTO shields and all guards in place. Replace damaged or missing shields and guards before operating.
- Follow warnings and instructions on machine signs (decals). Replace damaged or missing decals.
- Do not wear loose or bulky clothing around the PTO or other moving parts.
- Keep bystanders away from PTO driven equipment, and never allow children near machines.
- Read and understand the manuals for the PTO driven equipment and be aware of safe operating procedures and hazards that may not be readily apparent.
- Always walk around equipment to avoid coming near a turning PTO driveline. Stepping over, leaning across or crawling under a turning PTO driveline can cause entanglement.
- Position the machine and equipment hitch correctly to prevent driveline stress and separation.
- Use caution when turning. Turning too sharp can cause driveline damage.
- Use caution when raising PTO driven attachment. Excessive driveline angle can cause driveline damage. Use stops if needed.

Machine Requirements And Capabilities

- Use increased caution on slopes and near banks and ditches to prevent overturn.
- Make certain that the Slow Moving Vehicle (SMV) emblem is installed so that it is visible and legible. When transporting the equipment, use the flashing warning lights (if equipped) and follow all local regulations.
- Operate this equipment with a machine equipped with an approved Roll-Over Protective Structure (ROPS). Always wear seat belt when the ROPS is up. Serious injury or death could result from falling off the machine.
- Before leaving the operator’s position:
  1. Always park on a flat level surface.
  2. Place all controls in neutral.
  3. Engage the parking brake.
  4. Stop engine.
  5. Wait for all moving parts to stop.
- Carry passengers only in designated seating areas. Never allow riders on the machine or equipment. Falling off can result in serious injury or death.
- Start the equipment only when properly seated in the operator’s seat. Starting a machine in gear can result in serious injury or death.
- Operate the machine and equipment from the operator’s position only.
- The parking brake must be engaged before leaving the operator’s seat. Rollaway can occur because the transmission may not prevent machine movement.

- Fasten seat belt securely. If equipped with a foldable Roll-Over Protective Structure (ROPS), only fasten seat belt when ROPS is up and locked. DO NOT wear seat belt if ROPS is down.
- Machine’s three-point hitch must be equipped with sway bars or chains.
- Stop the machine and engage the parking brake. Install blocks in front of and behind the rear tires of the machine. Install blocks underneath and support the equipment securely before working under raised equipment.
- Keep bystanders clear of moving parts and the work area. Keep children away.
FIRE PREVENTION

Maintenance
The machine and some equipment have components that are at high temperatures under normal operating conditions. The primary source of high temperatures is the engine and exhaust system. The electrical system, if damaged or incorrectly maintained, can be a source of arcs or sparks.

Flammable debris (leaves, straw, etc.) must be removed regularly. If flammable debris is allowed to accumulate, it can cause a fire hazard. Clean often to avoid this accumulation. Flammable debris in the engine compartment is a potential fire hazard.

The operator’s area, engine compartment and engine cooling system must be inspected every day and cleaned if necessary to prevent fire hazards and overheating.

All fuels, most lubricants and some coolant mixtures are flammable. Flammable fluids that are leaking or spilled onto hot surfaces or onto electrical components can cause a fire.

Operation
The Farm King machine must be in good operating condition before use.

Check all of the items listed on the service schedule under the 8 hour column. (See “SERVICE SCHEDULE” on page 61.)

Do not use the machine where exhaust, arcs, sparks or hot components can contact flammable material, explosive dust or gases.

Starting
Do not use ether or starting fluids on any engine that has glow plugs. These starting aids can cause explosion and injure you or bystanders.

Use the procedure in the tractor’s operator’s manual for connecting the battery and for jump starting.

Electrical
Check all electrical wiring and connections for damage. Keep the battery terminals clean and tight. Repair or replace any damaged part or wires that are loose or frayed.

Battery gas can explode and cause serious injury. Do not jump start or charge a frozen or damaged battery. Keep any open flames or sparks away from batteries. Do not smoke in battery charging area.

Hydraulic System
Check hydraulic tubes, hoses and fittings for damage and leakage. Never use open flame or bare skin to check for leaks. Hydraulic tubes and hoses must be properly routed and have adequate support and secure clamps. Tighten or replace any parts that show leakage.

Always clean fluid spills. Do not use gasoline or diesel fuel for cleaning parts. Use commercial nonflammable solvents.

Fueling
Stop the engine and let it cool before adding fuel. No smoking! Do not refuel a machine near open flames or sparks. Fill the fuel tank outdoors.

Spark Arrester Exhaust System
The spark arrester exhaust system is designed to control the emission of hot particles from the engine and exhaust system, but the muffler and the exhaust gases are still hot.

Check the spark arrester exhaust system regularly to make sure it is maintained and working properly. Use the procedure in the machine’s Operator’s Manual for cleaning the spark arrester muffler (if equipped).
FIRE PREVENTION (CONT’D)

Welding And Grinding

Always clean the machine and equipment, disconnect the battery, and disconnect the wiring from the machine controls before welding. Cover rubber hoses, battery and all other flammable parts. Keep a fire extinguisher near the machine when welding.

Have good ventilation when grinding or welding painted parts. Wear dust mask when grinding painted parts. Toxic dust or gas can be produced.

Dust generated from repairing nonmetallic parts such as hoods, fenders or covers can be flammable or explosive. Repair such components in a well ventilated area away from open flames or sparks.

Fire Extinguishers

Know where fire extinguishers and first aid kits are located and how to use them. Inspect the fire extinguisher and service the fire extinguisher regularly. Obey the recommendations on the instructions plate.
SAFETY SIGNS (DECALS)

Follow the instructions on all the Signs (Decals) that are on the equipment. Replace any damaged signs (decals) and be sure they are in the correct locations. Equipment signs are available from your Farm King equipment dealer.

Left Rear Corner Of LH Deck

Right Rear Corner Of RH Deck

THROWN OBJECT HAZARD
-Avoid bodily injury. Object may be thrown great distance by cutting blade rotating under deck.
-Stay clear and watch out for bystanders. Stop if bystanders come close to work area. Keep all shields in place. Use protective shields on all discharge openings at front and rear of deck whenever possible.
-Before working on mower: Disengage power, shut off engine, remove key and make sure all blades have stopped turning.

ROTATING BLADES CAN CAUSE SERIOUS INJURY OR DEATH
-Stay clear of rotating parts.
-Blades may rotate for several minutes after power shut off.
-Do not place hands or feet under or into cutter.
-Disengage power, stop engine, set park brake, remove ignition key and make sure blades have stopped turning before leaving cab.
Rear Center Deck

1. Engage frame lock bracket and retainer before transporting, storing or working under frame to prevent machine from falling down and crushing someone.

DANGER
CRUSHING HAZARD
CAN CAUSE SERIOUS INJURY OR DEATH
- Engage transport locks.
- Block up before servicing.
- Purge air from hydraulic system before attempting to raise or lower implement.

WARNING
FALLING WING CAN CAUSE SERIOUS INJURY OR DEATH
- Always secure wing transport locks before transporting, servicing, or parking the cutter.
- Stand clear when lowering or raising wings.

DANGER
Engage frame lock bracket and retainer before transporting, storing or working under frame to prevent machine from falling down and crushing someone.
WARNING

Right Side Splitter Gearbox Guard / Shield

**CAUTION**

- An OPERATOR’S MANUAL and a WARRANTY REGISTRATION CARD were attached to this implement during final assembly at the factory. If they were not attached at the time of purchase, please contact the selling dealer at once.
- Read and understand the Manual before operating the implement.
- Complete, sign and mail in the Warranty Registration Card immediately.

**WARNING**

- HIGH PRESSURE FLUID CAN PIERCE SKIN CAUSING SERIOUS INJURY OR DEATH
  - Relieve pressure on system before repairing or adjusting.
  - Wear proper hand and eye protection when searching for leaks. Use wood or cardboard instead of hands.
  - Keep all components in good repair.

- ROLL OVER HAZARD CAN CAUSE SERIOUS INJURY OR DEATH
  - Decrease speed when turning.
  - Be careful on slopes with wings raised.
  - Do not operate with raised wings.

- DAMAGED BLADES CAN CAUSE SERIOUS INJURY OR DEATH
  - Inspect blades daily for chips, cracks, wear and abnormal bends.
  - Replace blades with genuine Farm King blades only.
  - Unbalanced blades are dangerous. Replace blades in pairs.

---

2. Always keep bystanders and co-workers a minimum of 300 ft (100 m) away.
3. Perform routine inspections and corrective/preventative maintenance. Keep all shields and guards in place.
4. Operate only with tractor equipped with ROPS and seatbelts.
5. Before leaving seat: Set brake, stop engine, remove key, and wait until all moving parts have stopped.
6. Always inspect the area before cutting. Remove all foreign debris.
7. Never allow riders, especially children, on tractor or equipment.
8. Stay clear of rotating or moving parts.
9. Never allow the cutter blades to contact solid objects or foreign materials.
10. Inspect blades daily for chips, cracks, wear, and abnormal bends. Unbalanced blades are dangerous. Replace damaged blades in pairs with genuine Farm King blades only.
11. Do not operate with wings above specified operating position. See Operator’s Manual for wing operating range.
12. Purge all air from hydraulic system before attempting to raise or lower this implement.
13. Lower the implement and relieve pressure before working on hydraulic system. Use a piece of cardboard or wood when searching for leaks.
14. Securely block up implement on firm ground before working beneath unit.
15. Transport with clean reflectors, SMV, and working lights as required by federal, provincial/state, and local laws.
16. Ensure transport safety chain and all hitch components are secure and in proper working order at all times.
17. Engage all safety locks before transporting.
18. Decrease speed when turning, be careful on slopes or uneven terrain with wings in raised position.
19. Keep mower deck clear of debris. There is a risk of fire if too much debris accumulates.
20. Do not transport above speeds of 20 mph (32 km/h). Exceeding these speeds may result in loss of control.
21. Do not operate in raised position. Objects may be thrown under guards.
Safety - Rotary Cutter 1530

Left Side Splitter Gearbox Guard / Shield

1. **CAUTION**
   - An OPERATOR’S MANUAL and a WARRANTY REGISTRATION CARD were attached to this implement during final assembly at the factory. If they were not attached at the time of purchase, please contact the selling dealer at once.
   - Read and understand the Manual before operating the implement.
   - Complete, sign and mail in the Warranty Registration Card immediately.

2. **WARNING**
   - HIGH PRESSURE FLUID CAN PIERCE SKIN CAUSING SERIOUS INJURY OR DEATH
     - Relieve pressure on system before repairing or adjusting.
     - Wear proper hand and eye protection when searching for leaks. Use wood or cardboard instead of hands.
     - Keep all components in good repair.

3. **CAUTION**
   - An OPERATOR’S MANUAL and a WARRANTY REGISTRATION CARD were attached to this implement during final assembly at the factory.
   - If they were not attached at the time of purchase, please contact the selling dealer at once.
   - Read and understand the Manual before operating the implement.
   - Complete, sign and mail in the Warranty Registration Card immediately.

4. **WARNING**
   - ROLL OVER HAZARD CAN CAUSE SERIOUS INJURY OR DEATH
     - Decrease speed when turning.
     - Be careful on slopes with wings raised.
     - Do not operate with raised wings.

5. **DANGER**
   - DAMAGED BLADES CAN CAUSE SERIOUS INJURY OR DEATH
     - Inspect blades daily for chips, cracks, wear and abnormal bends.
     - Replace blades with genuine Farm King blades only.
     - Unbalanced blades are dangerous.
     - Replace blades in pairs.
EQUIPMENT DECALS AND SIGNS

NOTE: All safety related decals are shown in the Safety Signs Section. (See “SAFETY SIGNS (DECALS)” on page 18.)

Check and replace any worn, torn, hard to read or missing decals on your equipment.

Farm King follows the general Safety Standards specified by the American Society of Agricultural and Biological Engineers (ASABE) and the Occupational Safety and Health Administration (OSHA). Anyone who will be operating and/or maintaining the 1530 Rotary Cutter must read and clearly understand ALL Safety, Operating and Maintenance information presented in this manual.

Annually review this information before the season start-up and make these periodic reviews of SAFETY and OPERATION a standard practice for all of your equipment. An untrained operator is unqualified to operate this machine.

The following sign-off sheet is provided for your record and to show that all personnel who will be working with the equipment have read and understand the information in this Operator And Parts Manual and have been instructed in the operation of the equipment.

LIGHT KIT INSTALLATION .................................................. 27
Dimensions ........................................................................... 27
Procedure .............................................................................. 28
LIGHT KIT INSTALLATION

Dimensions

Figure 3

Using the dimensions [Figure 3], measure and mark the locations where individual light kit components will be installed.
Procedure

NOTE: The following images show installing the RH tail lamp / warning lamp light. The procedure is the same for the LH tail lamp / warning lamp light.

Figure 4

Place the tail lamp mount bracket (Item 1) [Figure 4] at the pre measured / marked location on the RH wing.

Install one 1/4” x 3/4” self drilling screw (Item 2) [Figure 4] through the tail lamp mount bracket and into the RH wing deck (four locations).

Place the RH tail lamp / warning lamp light (Item 3) [Figure 4] onto the tail lamp mount bracket (amber light to the outside).

Install one 1/4” flat washer onto four 1/4” x 1” bolts (Item 4) [Figure 4]. Install the four bolts through the RH tail lamp / warning lamp light and tail lamp mount bracket. Install one 1/4” lock nut on each of the four bolts. Tighten bolts and lock nuts to secure the RH tail lamp / warning lamp light to the tail lamp mount bracket.

Repeat procedure to install the LH tail lamp / warning lamp light and tail lamp mount bracket.

Figure 5

Route the wire harness (Item 1) [Figure 5] to the front of the Rotary Cutter with hydraulic hoses and to the RH & LH tail lamp / warning lamp lights.

Connect the wire harness to the RH & LH tail lamp / warning lamp light pig tails (Item 2) [Figure 5].

Figure 6

Install the 3/8” clamps (Item 1) [Figure 6] around the wire harness at the pre measured / marked locations.

Secure 3/8” clamps to the center section and wings using 1/4” x 3/4” self drilling screws.

NOTE: Before securing the 3/8” clamps to Rotary Cutter, make sure to leave a loop in the wire harness to allow wings to fold / unfold without damaging the wire harness.
Figure 7

Remove bolts (Item 1) [Figure 7] on the hydraulic hose clamps. Place a 3/8" clamp around the wire harness and along with hydraulic hose clamp hole. Re-install the bolt (all locations to the front).

Figure 8

Install cable ties (Item 1) [Figure 8] around the hydraulic hoses and wire harness as needed.

Figure 9

Connect the wire harness (Item 1) [Figure 9] to the tractor.

Test the RH & LH tail lamp / warning lamp lights for correct operation.

GENERAL INFORMATION

Pre - Operation Checklist

Before operating the Rotary Cutter for the first time and each time thereafter, check the following items:

4. Check that wheel bolt torque is 93 ft. lb. (126 N\text{m}).

5. Fully clean the equipment. (See “CLEANING THE ROTARY CUTTER” on page 76.)

6. Inspect all safety reflective decals, slow moving vehicle decals and lights where applicable.

WARNING

AVOID INJURY OR DEATH

- Disengage the PTO, engage the machine’s parking brake, stop the engine and make sure all rotating components are completely stopped before connecting, disconnecting, adjusting or cleaning any PTO driven equipment.
- Always keep PTO shields and all guards in place when using PTO driven equipment.
- Disengage PTO for road travel.
- Keep hands, feet and clothing away.

Leaking fluids under pressure can enter the skin and cause serious injury or death. Immediate medical attention is required. Wear goggles. Use cardboard to check for leaks.

7. Check condition of all hydraulic components for leaks. Repair as required.

NOTE: Do not operate with hydraulic leaks.

8. Verify that the wing transport locks have been removed and securely stored.

9. Verify that the rotary cutter is properly connected to the tractor with the safety chain.

WARNING

AVOID INJURY OR DEATH

Wear safety glasses to prevent eye injury when any of the following conditions exist:

- When fluids are under pressure.
- Flying debris or loose material is present.
- Engine is running.
- Tools are being used.

1. Lubricate the equipment per the schedule outline in the Maintenance Section. (See “SERVICE SCHEDULE” on page 61.)

2. Check the rotary cutter hitch for damaged, loose or missing parts. Repair as needed before operation.

3. Check that tire pressure (air craft tires only) is 40 psi (276 kpa).
Break - In Checklist

Check the following mechanical items after 1 hour of operation and again after 10 hours of operation:

1. Check condition of all hydraulic components for leaks. Tighten fittings to correct leaks or replace components. Do not operate with hydraulic leaks.

2. Check the rotary cutter hitch for damaged, loose or missing parts [Figure 10]. Repair as needed before operation.
3. Check for loose fasteners and hardware. Tighten as required.
4. Check that tire pressure (air craft tires only) is 40 psi (276 kpa).
5. Check that wheel bolt torque is 93 ft. lb. (126 Nm).

Tractor Requirements

AVOID SERIOUS INJURY OR DEATH

The tractor must be equipped with an approved Roll Over Protection Structure (ROPS) and safety belts to help prevent personal injury or death caused by tractor roll over.

WARNING

Do NOT exceed 540 RPM PTO (if equipped).
Do NOT exceed 1000 RPM PTO (if equipped).
Keep PTO shields and all guards in place.
Keep away from moving parts.
Keep bystanders away.

The rotary cutter will require a tractor with minimum 65 hp (48 kw) and three pair remote hydraulic outlets.

IMPORTANT

Towing Vehicle / Tractor must have adequate braking capacity to safely control 5900 lb. (2676 kg) GVW trailing load. Do not exceed 20 mph (32 km/h).

Adjust the tractor’s drawbar in / out, until the center of the hitch pin hole (Item 1) [Figure 11] is 16 inches (410 mm) from the end of the tractor’s PTO shaft. See your tractor’s owner’s manual for correct adjustment procedures.
Entering And Leaving The Operator's Position

![IMPORTANT]

Follow the instructions in your tractor's operation manual for the correct procedure.

**Entering The Operator's Position**

Move to the operator's position, start the engine and release the parking brake.

**Leaving The Operator's Position**

![WARNING]

**AVOID INJURY OR DEATH**

Before you leave the operator's position:
- Always park on a flat level surface.
- Place all controls in NEUTRAL.
- Engage the park brake.
- Stop the engine and remove the key.
- Wait for all moving parts to stop.

Park the tractor / equipment on a flat level surface.

Place all controls in neutral, engage the park brake, stop the engine and wait for all moving parts to stop. Leave the operator's position.
INITIAL SET-UP

Frame Lock

**Frame Lock Engaged**

**Figure 12**

When transporting, storing or working under rotary cutter the frame lock bracket (Item 1) must be rotated over the lift cylinder shaft and secured in position with the rod and retaining clip (Item 2) [Figure 12].

**Frame Lock Disengaged**

**Figure 13**

When operating the rotary cutter, remove the rod and retaining clip (Item 2) [Figure 12].

Rotate the frame lock bracket (Item 1) back against the lift cylinder mount on the center axle. Re-install the rod and retaining clip (Item 2) [Figure 13].

---

Engage frame lock bracket and retainer before transporting, storing or working under frame to prevent machine from falling down and crushing someone.

**CRUSHING HAZARD CAN CAUSE SERIOUS INJURY OR DEATH**

- Engage transport locks.
- Block up before servicing.
- Purge air from hydraulic system before attempting to raise or lower implement.
Wing Transport Locks

DANGER

FALLING WING CAN CAUSE SERIOUS INJURY OR DEATH

- Always secure wing transport locks before transporting, servicing, or parking the cutter.
- Stand clear when lowering or raising wings.

WARNING

CRUSHING HAZARD CAN CAUSE SERIOUS INJURY OR DEATH

- Engage transport locks.
- Block up before servicing.
- Purge air from hydraulic system before attempting to raise or lower implement.

Wing Transport Lock Engaged

Figure 14

When transporting, storing or working under rotary cutter the wing transport lock (Item 1) (both sides) must be pushed forward until the wing transport lock fully engages the hole (Item 2) [Figure 14] in the wing cylinder mounting bracket.

Install retaining pin (Item 3) [Figure 14] to secure the wing transport lock in the engaged position.

Wing Transport Lock Disengaged

Figure 15

Before lowering the wings, remove the retaining pin (Item 3) [Figure 14].

Pull the wing transport lock (Item 1) back until the roll pin (Item 2) stops the wing transport lock. Re-install the retaining pin (Item 3) [Figure 15] to secure the wing transport lock in the disengaged position.
Connecting The Rotary Cutter To The Tractor

Always inspect the tractor’s drawbar and Rotary Cutter hitch before connecting. See the tractor’s owner’s manual.

Verify that the tractor’s drawbar is adjusted correctly for use with the Rotary Cutter. (See “Drawbar Adjustment” on page 34.)

**Figure 16**

Remove snapper clip (Item 1) and rotate the clevis (Item 2) up or down until the clevis is parallel to the ground. Align the closest notch (Item 3) [Figure 16] on the clevis with hole and re-install the snapper clip.

Enter the operator’s position. (See “Entering The Operator’s Position” on page 35.)

Move the tractor into position in front of the Rotary Cutter.

---

**WARNING**

*AVOID INJURY OR DEATH*

Before moving the tractor, look in all directions and make sure no bystanders, especially small children are in the work area. Do not allow anyone between the tractor and the equipment when backing up to the equipment for connecting.

Move the tractor backwards, aligning the drawbar with the Rotary Cutter hitch.

**NOTE:** The jack may need to be lowered or raised for proper alignment of the drawbar and hitch.

If the Rotary Cutter hitch needs to be adjusted, stop the tractor when drawbar is just in front of the Rotary Cutter hitch.

Leave the operator’s position. (See “Leaving The Operator’s Position” on page 35.)
Figure 17

Turn the handle (Item 1) [Figure 17] clockwise to raise the hitch or counterclockwise to lower the hitch.

Lower or raise the Rotary Cutter hitch until aligned with the tractor’s drawbar.

Move to the operator’s seat, start the engine and release the parking brake.

Move the tractor backwards, aligning the drawbar hitch pin hole with the Rotary Cutter hitch pin hole(s).

Stop the tractor and leave operator’s position.

WARNING

AVOID INJURY OR DEATH
Keep fingers and hands out of pinch points when connecting and disconnecting equipment.

NOTE: Always use a hitch pin of adequate size and strength and a retaining pin with a locking device.

Figure 18

Install the hitch pin (Item 1) [Figure 18] and retaining pin to securely fasten the Rotary Cutter hitch to the tractor drawbar.

Attach the safety chain (Item 2) [Figure 18] around the drawbar.

Remove retaining pin (Item 3) [Figure 18], rotate the jack into the operation / storage position. Re-install retaining pin.

Figure 19

Remove snapper clip (Item 1) [Figure 19] and re-install in the storage hole on the hitch.
Connecting The PTO Driveline

**WARNING**

**AVOID INJURY OR DEATH**

Warnings on the machine and in the manuals are for your safety. Failure to obey warnings can cause serious injury or death.

**NOTE:** Clean and grease tractor’s PTO shaft and PTO driveline coupling each time driveline is connected.

Stop the engine and leave the operator’s position. (See “Leaving The Operator’s Position” on page 35.)

**IMPORTANT**

Improper hitch installation can cause PTO driveline damage.
- Do not modify the hitch or use an unapproved hitch.
- Make sure the PTO driveline is of adequate length and that u-joints are in the correct phase.

Remove the PTO driveline from the storage position (if applicable).

Retract the collar and slide the PTO driveline (Item 1) [Figure 20] onto the tractor PTO shaft until it locks onto the shaft. Push and pull on the PTO driveline to verify it is securely attached to the PTO shaft. Install PTO driveline safety chain (Item 2) [Figure 20].

**NOTE:** The PTO driveline must have a means to retain it to the PTO shaft on the tractor.

**WARNING**

- Do NOT exceed 540 RPM PTO (if equipped).
- Do NOT exceed 1000 RPM PTO (if equipped).
- Keep PTO shields and all guards in place.
- Keep away from moving parts.
- Keep bystanders away.
PTO Driveline

PTO Driveline Length Check

NOTE: Due to variations in distances between tractor PTO shafts and implement input shafts, drivelines may need to be shortened or a longer shaft may be required. When fitting the implement to the tractor, the PTO driveline, with telescoping sections, must be inspected. When the sections are at the most compressed operating position, the sections must not “bottom out”. At its shortest length, there must be at least 2 in. (50.8 mm) of clearance between each section end and opposite section end at the most compressed operating position. When the sections are at the most extended position, there must be sufficient engagement between the sections. At its farthest operating extension, a minimum section engagement of 33% of shaft length must be maintained.

WARNING

AVOID INJURY OR DEATH

- Do NOT exceed the rated implement PTO speed.
- Stay clear of rotating driveline.
- Keep bystanders away.
- Keep hands, feet, clothing and long hair away.
- Keep PTO shields and all guards in place.
- Disengage PTO, move the tractor controls to the Neutral position, stop the engine and make sure all rotating components are stopped before leaving the operator’s position.
- Do NOT service the tractor or implement with the PTO engaged.
- Do NOT service the implement in a raised position unless properly blocked and with all rotating components stopped.
- Disengage PTO for road travel.

PTO Driveline Bottoming Out Check

Stop the engine and leave the operator’s position. (See “Leaving The Operator’s Position” on page 35.)

Make sure the PTO driveline and all rotating components have come to a complete stop before leaving the operator’s position (if applicable).

![Figure 21](image)

1. Disconnect the PTO driveline from the tractor and slide the PTO driveline together until fully retracted (compressed).
2. Measure the retracted (compressed) length of PTO driveline [Figure 21].
3. Extend the PTO driveline 2 in. (50.8 mm) from the retracted length and place a mark on the inner guard at the end of the outer guard [Figure 21].
4. Reattach the PTO driveline to the tractor PTO shaft.
5. Enter the operator’s position. (See “Entering The Operator’s Position” on page 35.) Start the engine.
6. With the rear PTO DISENGAGED, raise and lower the implement and watch the PTO driveline extend and retract.
7. If the outer PTO driveline guard slides in (retracts) over the mark at any point of travel, the PTO driveline needs to be shortened.
Reducing The PTO Driveline Length

Stop the engine and leave the operator's position. (See “Leaving The Operator’s Position” on page 35.)

Make sure the PTO driveline and all rotating components have come to a complete stop before leaving the operator's position.

![WARNING]

**AVOID INJURY OR DEATH**

- Do NOT exceed the rated implement PTO speed.
- Stay clear of rotating driveline.
- Keep bystanders away.
- Keep hands, feet, clothing and long hair away.
- Keep PTO shields and all guards in place.
- Disengage PTO, move the tractor controls to the Neutral position, stop the engine and make sure all rotating components are stopped before leaving the operator's position.
- Do NOT service the tractor or implement with the PTO engaged.
- Do NOT service the implement in a raised position unless properly blocked and with all rotating components stopped.
- Disengage PTO for road travel.

Remove the PTO driveline from the tractor and place in storage position (if equipped).

Enter the operator's position. (See “Entering The Operator's Position” on page 35.) Start the engine.

Raise or lower the Rotary Cutter to get the shortest distance between the tractor PTO shaft and Rotary Cutter gearbox PTO shaft.

Stop the engine and leave the operator's position. (See “Leaving The Operator's Position” on page 35.)

Pull the PTO driveline apart and reinstall each individual section; one half to the tractor PTO shaft and one half to the implement gearbox PTO shaft.

![Figure 22]

1. Hold PTO driveline sections parallel to one another and measure back 2 in. (50.8 mm) (Item 1) from the yoke of each section and place mark on opposite section. Cut the plastic shield at this length (Item 2) [Figure 22].

![Figure 23]

2. Using the plastic guard lengths that were cut off in [Figure 22], align the cut off lengths (Item 1) with the end of the inner & outer shafts. Place a mark (Item 2) [Figure 23] on the inner & outer shafts and cut the inner & outer shafts off at this length.

3. Round off all sharp edges and debur.

4. Thoroughly grease and install the PTO driveline halves together.

5. Recheck for proper operation.
PTO Driveline Engagement Check

Stop the engine and leave the operator’s position. (See “Leaving The Operator’s Position” on page 35.)

Make sure the PTO driveline and all rotating components have come to a complete stop before exiting the compact tractor.

**WARNING**

AVOID INJURY OR DEATH

- Do NOT exceed the rated implement PTO speed.
- Stay clear of rotating driveline.
- Keep bystanders away.
- Keep hands, feet, clothing and long hair away.
- Keep PTO shields and all guards in place.
- Disengage PTO, move the tractor controls to the Neutral position, stop the engine and make sure all rotating components are stopped before leaving the operator’s position.
- Do NOT service the tractor or implement with the PTO engaged.
- Do NOT service the implement in a raised position unless properly blocked and with all rotating components stopped.
- Disengage PTO for road travel.

1. Disconnect the PTO driveline from the tractor and fully slide the driveline sections together (retracted).

**Figure 24**

2. Measure the retracted (compressed) length of the PTO driveline between the bases of the plastic guards [Figure 24].

3. Multiply the retracted driveline length by 1.667 to determine the PTO driveline Maximum Operating Length. (i.e.: 25.5 in. (647,7 mm) x 1.667 = 42.5 in. (1079,7 mm) Maximum Operating Length).

4. Attach the PTO driveline to the tractor PTO output shaft.

5. Enter the operator’s position. (See “Entering The Operator’s Position” on page 35.)

6. With the PTO driveline attached, position the Rotary Cutter to where the telescoping PTO driveline is at its maximum operating extension.

7. Stop the engine and leave the operator’s position. (See “Leaving The Operator’s Position” on page 35.) Make sure the PTO driveline and all rotating components have come to a complete stop before leaving the operator’s position.

**Figure 25**

8. Measure the length of the PTO driveline between the bases of the plastic shields [Figure 25] to determine the maximum operating length.

A. If the measured maximum operating length is less than the Maximum Operating Length calculation (from Step 3), the PTO driveline has adequate engagement

B. If the measured maximum operating length is equal to or more than the Maximum Operating Length calculation (from Step 3), the PTO driveline does not have adequate engagement and should be replaced with a longer driveline. See your Farm King dealer for available PTO drivelines.
Connecting Hydraulic Hoses

**WARNING**

HIGH PRESSURE FLUID HAZARD

To prevent serious injury or death from high pressure fluid:

- Relieve pressure on system before repairing or adjusting.
- Wear proper hand and eye protection when searching for leaks. Use wood or cardboard instead of hands.
- Keep all components in good repair.

**IMPORTANT**

- Contain and dispose of any oil leakage in an environmentally safe manner.
- Thoroughly clean the quick couplers before making connections. Dirt can quickly damage the system.

**NOTE:** Make sure the quick couplers are fully engaged. If the quick couplers do not fully engage, check to see that the couplers are the same size and type.

---

To Connect:

**Figure 26**

Pull back on the collar of the female coupler, push couplers together, release the collar when the couplers are fully engaged and locked [Figure 26].

Install the lift cylinder quick coupler hose (Item 1) [Figure 26] (Yellow dust cap).

Install the RH wing cylinder quick coupler hoses (Item 2) [Figure 26] (Blue dust cap).

Install the LH wing cylinder quick coupler hoses (Item 3) [Figure 26] (Green dust cap).

To Disconnect:

**WARNING**

AVOID BURNS

Hydraulic fluid, tubes, fittings and quick couplers can get hot when running equipment. Be careful when connecting and disconnecting quick couplers.

Pull back on the collar and pull the male coupler out to disconnect.

Lower jack until weight of equipment is resting on tractor drawbar. Pull retaining pin on jack and remove. Mount jack to storage bracket and secure with retaining pin.
Purging The Hydraulic System

**DANGER**

**PINCHING / CRUSHING HAZARD**

To prevent serious injury or death from pinching or crushing:

- Air in the hydraulic system will cause the wings to drop suddenly when lowering.
- Keep away from wings when engine is running.
- Keep bystanders away.

Enter the tractor. (See “Entering The Operator’s Position” on page 35.)

Start the engine and engage the tractor auxiliary hydraulics.

Using the individual tractor auxiliary controls:

Fully extend and retract RH & LH wing hydraulic cylinders to remove any air in the hydraulic system.

Fully extend and retract lift hydraulic cylinder to remove any air in the hydraulic system.

Fully unfold RH & LH wings and lower the rotary cutter frame until the skid shoes contact the ground.

Turn tractor engine off and exit the tractor. (See “Leaving The Operator’s Position” on page 35.)

---

**PRE OPERATION**

**Recommended Deck Height**

**IMPORTANT**

- Adjust the deck height to the tractor’s drawbar. Drawbar heights vary depending on the tractor being used.
- The Rotary Cutter usually performs best with the front raised higher than the rear.

---

**Cutting Conditions**

**Light Material / Normal Cutting** - Set front of deck level to one inch (25.4 mm) higher than the rear.

**Brush Or Dense Tall Weeds** - Set front of deck two - three inches (51 - 76 mm) higher than the rear.

**Rough Ground Cutting** - Adjust the front of the cutter two - three inches (51 - 76 mm) higher than the rear to hold the front blade up, keeping the front blade from contacting the rough ground.

**NOTE:** Operator can adjust deck to a height to best obtain the finished cutting desired.
Leveling The Center Deck

Connect the rotary cutter to the tractor. (See “Connecting The Rotary Cutter To The Tractor” on page 38.)

Enter the tractor, start the engine and engage tractor auxiliary hydraulics.

Fully raise RH & LH wings and center deck (if required).

Move the tractor and rotary cutter to a flat level surface.

Engage the tractor’s parking brake, turn tractor engine off and exit the tractor. (See “Leaving The Operator’s Position” on page 35.)

**Figure 27**

Measure the distance from the ground to the top of the front deck tube (Item 1) **[Figure 27]** (both sides). Record measurement.

**Figure 28**

Measure the distance from the ground to the top of the rear deck tube (Item 1) **[Figure 28]** (both sides). Record measurement.

**Figure 29**

Lower the jack (Item 1), place a jack stand (Item 2) **[Figure 29]** under the skid shoe (both sides).

Disconnect the Rotary Cutter from the tractor.
Figure 30

Remove 3/8" bolt (Item 1) [Figure 30] and lock nut.

To Raise The Front Of The Deck

Turn the adjustment rod (Item 2) [Figure 30] clockwise to raise the front of the deck (both sides).

To Lower The Front Of The Deck

Turn the adjustment rod (Item 2) [Figure 30] counterclockwise to lower the front of the deck (both sides).

Leveling The RH & LH Wings

Level center deck prior to leveling wings. (See “Leveling The Center Deck” on page 46.)

The top of the RH & LH wings must be level with the top of the middle deck.

Connect the rotary cutter to the tractor. (See “Connecting The Rotary Cutter To The Tractor” on page 38.)

Enter the tractor, start the engine and engage tractor auxiliary hydraulics.

Using the tractor controls, fully raise the center deck.

Move the tractor and Rotary Cutter to a flat level surface.

Engage the tractor’s parking brake, turn tractor engine off and exit the tractor. (See “Leaving The Operator’s Position” on page 35.)

Place jack stands under center deck.

Remove frame lock from transport position. (See “Frame Lock” on page 36.)

Remove wing transport locks from transport position. (See “Wing Transport Locks” on page 37.)

Enter the tractor, start the engine and engage tractor auxiliary hydraulics.

Using the tractor controls, fully lower RH & LH wings.

Engage the tractor’s parking brake, turn tractor engine off and exit the tractor. (See “Leaving The Operator’s Position” on page 35.)

Apply down pressure / bounce the wings to settle the wings.

Turn LH & RH adjustment rods evenly.
Visually sight across the top of the wings and center deck to verify that the wings are level with the center deck [Figure 31].

**Lowering Outer Edge / Side Of Wing**

Loosen the jam nut (Item 1). Rotate the turnbuckle assembly (Item 2) [Figure 32] clockwise to lower the outer edge / side of the wing.

Rotate turnbuckle assembly until the wing is level with the center deck or at the desired height. Tighten jam nut.

Repeat for opposite wing.

**Raising Outer Edge / Side Of Wing**

Loosen the jam nut (Item 1). Rotate the turnbuckle assembly (Item 2) [Figure 32] counter-clockwise to raise the outer edge / side of the wing.

Rotate turnbuckle assembly until the wing is level with the center deck or at the desired height. Tighten jam nut.

Repeat for opposite wing.
OPERATING THE ROTARY CUTTER

Cutting Procedure

**THROWN OBJECT HAZARD**

To prevent serious injury or death from thrown objects:

- Stay clear and watch out for bystanders. Stop if bystanders come close to work area. Keep all shields in place. Use protective shields on all discharge openings at front and rear of deck whenever possible.
- Before working on mower: Disengage power, shut off engine, remove key and make sure all blades have stopped turning.

**DANGER**

- Inspect blades daily for chips, cracks, wear and abnormal bends.
- Replace blades with genuine Farm King blades only.
- Unbalanced blades are dangerous.
- Replace blades in pairs.

**ROTATING BLADES CAN CAUSE SERIOUS INJURY OR DEATH**

- Stay clear of rotating parts.
- Blades may rotate for several minutes after power shut off.
- Do not place hands or feet under or into cutter.
- Disengage power, stop engine, set park brake, remove ignition key and make sure blades have stopped turning before leaving cab.

**FALLING WING CAN CAUSE SERIOUS INJURY OR DEATH**

- Always secure wing transport locks before transporting, servicing, or parking the cutter.
- Stand clear when lowering or raising wings.

**AVOID SERIOUS INJURY OR DEATH**

Do not operate Rotary Cutter when deck or wings are raised. Exposed rotating blades create a potential hazard of thrown objects which may lead to serious injury or death.
Purge air from hydraulic system before attempting to raise or lower implement.

Do NOT exceed 540 RPM PTO speed.
Do NOT exceed 1000 RPM PTO speed.
Keep PTO shields and all guards in place.
Keep away from moving parts.
Keep bystanders away.
Verify that the PTO driveline does not contact the cutter when raising and lowering or when cornering.

Do not allow hydraulic hoses to contact brush, branches, and other objects that could cause damage to the hydraulic hoses.

Do not exceed the rated PTO speed. Excessive speed will cause damage to the drive components.

Avoid making tight turns where the rear tractor tires and three-point arms may contact the rotary cutter hitch, PTO drivelines or wing decks. Fully raise the three-point arms when operating / transporting the rotary cutter.
Connect the rotary cutter to the tractor. (See “Connecting The Rotary Cutter To The Tractor” on page 38.)

Enter the tractor, start the engine and release the parking brake.

Raise the rotary cutter to the travel position.

Move the tractor and rotary cutter to the work area.

Position the tractor and rotary cutter at the starting point of cutting area.

Stop the tractor, engage the parking brake and turn the engine off.

Leave the operator’s position. (See “Entering And Leaving The Operator’s Position” on page 35.)

Remove frame lock. (See “Frame Lock” on page 36.)

Remove transport locks. (See “Wing Transport Locks” on page 37.)

Enter the tractor and start the engine.

Using the tractor controls, lower the wings.

Stop the tractor, engage the parking brake and turn the engine off.

Leave the operator’s position. (See “Entering And Leaving The Operator’s Position” on page 35.)

Adjust the rotary cutter to the desired cutting height. (See “Recommended Deck Height” on page 45.)

Enter the tractor, start the engine and release the parking brake.

### WARNING

- Do NOT exceed 540 RPM PTO (if equipped).
- Do NOT exceed 1000 RPM PTO (if equipped).
- Keep PTO shields and all guards in place.
- Keep away from moving parts.
- Keep bystanders away.

#### 540 RPM Operating PTO Speed

Engage the tractor's PTO, increase tractor PTO speed to 540 rpm when doing normal cutting.

**NOTE:** If the forward speed is too high, a lower gear can be used.

#### 1000 RPM Operating PTO Speed

Engage the tractor's PTO, increase tractor PTO speed to 1000 rpm when doing normal cutting.

**NOTE:** If the forward speed is too high, a lower gear can be used.

### IMPORTANT

Recommended operating ground speed is 0 - 5 mph (0 - 8 km/h). Use slower speeds when operating on or near steep slopes, ditches, drop-offs, rough terrain, overhead obstructions, power lines, or when avoiding obstacles and other foreign debris.

**Wing Float Position**

It is recommended whenever possible to operate both LH & RH wings (if applicable) in the float position allowing the cylinder to be free to extend or retract allowing the Rotary Cutter to follow the contour of the work area.
Cutting Angles

WARNING

It is not recommended to operate Rotary Cutter wings raised at an angle greater than 25 degrees to prevent damage to the PTO drivelines and help prevent personal injury from thrown objects or debris.

Figure 33

The LH & RH Rotary Cutter wings can be operated at angles of up to 25 degrees down and 25 degrees up [Figure 33].
Cutting Recommendations

NOTE: Loss of power / PTO speed will result in uneven cutting. Adjust travel speed as required for material being cut, while maintaining the rated operating PTO speed (540 rpm / 1000 rpm PTO speed).

**Light Material / Normal Cutting**
Adjust the front of the cutter one inch (25.4 mm) higher than the rear or level for light / normal cutting.

**Brush Or Dense Tall Weeds**
Adjust the front of the cutter two - three inches (51 - 76 mm) higher than the rear to better shred brush or dense tall weeds.

**Rough Ground Cutting**
Adjust the front of the cutter two - three inches (51 - 76 mm) higher than the rear to hold the front blade up, keeping the front blade from contacting the rough ground.

Figure 34

Adjust Rotary Cutter to the desired height, engage the tractor PTO, lower the Rotary Cutter and begin cutting [Figure 34].
TRANSPORTING
Requirements

**DANGER**
**ELECTROCUTION HAZARD**
To prevent serious injury or death from electrocution:

- Be aware of overhead power lines.
- Keep away from power lines when transporting or raising Rotary Cutter wings.
- Electrocutation can occur without direct contact.

**WARNING**
Use of an unapproved hitch or tractor / tow vehicle can result in loss of control, leading to serious injury or death.

Tractor / tow vehicle and hitch must have the rated capacity to tow equipment.

**CAUTION**
- Do not operate the unit before reading and understanding the Operator Manual.
- Make certain everyone is clear of the equipment before applying power or moving the machine.
- Raise unit to the recommended transport position before transporting.
- Disconnect PTO driveline from the tractor before moving or transporting.

---

**IMPORTANT**
Never exceed 20 mph (32 kph).

**IMPORTANT**
Do not move or transport the Rotary Cutter unless the wings are in the raised / transport position and securely locked before transporting.

Comply with federal, state, local and provincial laws regarding the transport of farm equipment on public roadways.

Verify that the tractor / tow vehicle is approved for transporting the equipment and that the equipment is securely attached to the tractor / tow vehicle.

Verify safety chain is installed and properly connected before transporting equipment.

Verify that the SMV (Slow Moving Vehicle) emblem, all lights and reflectors are clean and visible.

Disconnect the PTO driveline from the tractor before transporting.

**Transporting Guidelines**
The ratio of the tractor / tow vehicle weight to the loaded equipment weight plays an important role in defining acceptable travel speed.

**TRAVEL SPEED** - Acceptable travel speed.

**WEIGHT RATIO** - Weight of fully equipped or loaded implement(s) relative to weight of tractor / tow vehicle.

<table>
<thead>
<tr>
<th>TRAVEL SPEED</th>
<th>WEIGHT RATIO</th>
</tr>

Transporting Procedure

Enter the tractor, start the engine and engage the tractor's hydraulics.

Using the tractor's hydraulic controls, fully raise the center deck, then fully raise the wings. Run the tractor engine at low idle.

Stop the tractor, engage the parking brake and turn the engine off.

Leave the operator's position. (See “Entering And Leaving The Operator's Position” on page 35.)

Lock wings in the transport position. (See “Wing Transport Locks” on page 37.)

Engage the frame lock. (See “Frame Lock” on page 36.)

**Figure 35**

Remove the retaining clip and pin (Item 1) [Figure 35].

Rotate the PTO driveline holder (Item 2) [Figure 35] up 90° to the transport position. Re-install pin and retaining clip.

**Figure 36**

Remove the PTO driveline safety chain (Item 1). Retract the collar (Item 2) [Figure 36] and slide the PTO driveline off the tractor PTO shaft.

**Figure 37**

Remove the retaining clip and pin (Item 1) [Figure 37].

Place the PTO driveline (Item 2) [Figure 37] in the holder. Re-install pin and retaining clip.

Fully raise the jack (Item 3) [Figure 37] and rotate into the transport position (horizontal).

Verify that the Rotary Cutter is securely fastened to the tractor / tow vehicle and that the hitch safety chain is properly attached to the Rotary Cutter and tractor / tow vehicle.

Verify that the SMV (Slow Moving Vehicle) sign is attached and visible.

Verify that the amber lights are clean and operating correctly.

TROUBLESHOOTING

General Chart

WARNING

Instructions are necessary before operating or servicing equipment. Read and understand the Operator And Parts Manual and safety signs (decals) on equipment. Follow warnings and instructions in the manuals when making repairs, adjustments or servicing. Check for correct function after adjustments, repairs or service. Untrained operators and failure to follow instructions can cause injury or death.

NOTE: If a problem is encountered that is difficult to solve, even after having read through this troubleshooting section, please call your local distributor or dealer. Before you call, please have this Operator And Parts Manual and the serial number of your machine at hand.

SERVICE SCHEDULE

Maintenance Intervals

Maintenance work must be done at regular intervals. Failure to do so will result in excessive wear and early failures. The service schedule is a guide for correct maintenance of the 1530 Rotary Cutter.

Instructions are necessary before operating or servicing equipment. Read and understand the Operator and Parts Manual and safety signs (decals) on equipment. Follow warnings and instructions in the manuals when making repairs, adjustments or servicing. Check for correct function after adjustments, repairs or service. Untrained operators and failure to follow instructions can cause injury or death.

**LUBRICATION**

**Recommendations**

Always use a good quality multi-purpose / lithium base grease when lubricating the equipment.

---

**IMPORTANT**

Do not over-grease bearings. Greasing too often can damage seals and lead to premature bearing failure.

- Always use a hand-held grease gun.
- Clean fitting before greasing, to avoid injecting dirt and grit.
- Replace and repair broken fittings immediately.
- If fittings will not take grease, remove and clean thoroughly. Replace fitting if necessary.

---

**Locations**

**Figure 38**

![540 RPM Driveline](F1985A)

Apply 25-30 pumps of grease to CV (Constant Velocity) body (Item 1) *[Figure 38]*.

**Figure 39**

![1000 RPM Driveline](F1986A)

Apply 25-30 pumps of grease to CV (Constant Velocity) body (Item 1) *[Figure 39]*.

---

**IMPORTANT**

Fluid such as engine oil, hydraulic fluid, coolants, grease, etc. must be disposed of in an environmentally safe manner. Some regulations require that certain spills and leaks on the ground must be cleaned in a specific manner. See local, state and federal regulations for the correct disposal.
Lubricate the following grease locations EVERY 8 HOURS:

**Figure 40**

Apply two - three pumps of grease to the u-joints (Item 1) [Figure 40].

**Figure 41**

Apply two - three pumps of grease to the u-joints (Item 1) and shaft (Item 2) [Figure 41].

**Figure 42**

Apply two - three pumps of grease to the u-joints (Item 1) [Figure 42] of the slip clutch driveline.

**Figure 43**

Apply two - three pumps of grease to u-joints (Item 1) [Figure 43] of the splitter driveline.
Apply two - three pumps of grease to the clevis pivot (Item 1) [Figure 44].

Apply two - three pumps of grease to the suspension arm (Item 1) [Figure 45] (all locations).

Apply two - three pumps of grease to the axle pivots (Item 1) [Figure 46] (LH & RH locations).

Apply two - three pumps of grease to the center axle pivots (Item 1) [Figure 47].
Apply two - three pumps of grease to the hitch pivot pin (Item 1) [Figure 48] (both sides).

Apply two - three pumps of grease to the adjustment rod (Item 1) [Figure 49].

Apply two - three pumps of grease to the turnbuckle (Item 1) [Figure 50] (both locations).

Apply two - three pumps of grease to the wheel bearing (Item 1) [Figure 51].
SPLITTER GEARBOX

Checking Gear Oil Level

Park the tractor and Rotary Cutter on a flat level surface.

![IMPORTANT]

Allow gear oil to settle into the bottom cavity of the gearbox for approximately 15-20 min. before checking level on dipstick.

Figure 52

Remove the two knobs (Item 1) and rotate guards (Item 2) [Figure 52] to the rear.

Figure 53

Rotate guards allowing latch plate (Item 1) to slide on the latch bolt (Item 2) and into the vertical slot (Item 3) [Figure 53] on the latch plate holding the guards open.

Figure 54

NOTE: To get an accurate reading of oil level, do not screw in the dipstick.

Remove dipstick / vent plug (Item 1) [Figure 54].

Wipe the dipstick clean. Place the dipstick back into the splitter gearbox until the dipstick makes contact with the splitter gearbox. Pull dipstick out and check gear oil level.

The gear oil level should be at the fill line (Item 2) [Figure 54].

Add SAE 80W-90 gear oil until oil reaches the dipstick fill line (Item 2). Install and tighten dipstick / vent plug (Item 1) [Figure 54].

![IMPORTANT]

Wait approximately 15-20 min. after filling the splitter gearbox to allow gear oil to settle into the bottom cavity before checking level on dipstick.
Changing Gear Oil

![Important](image)

Replace the gear oil in new gearboxes after first 50 hours of operation. Then replace the gear oil annually.

Park the tractor and Rotary Cutter on a flat level surface.

Leave the operator's position. (See “Leaving The Operator’s Position” on page 35.)

![Warning](image)

Always wear proper hand and eye protection when servicing the implement.

**Figure 55**

Remove the two knobs (Item 1) and rotate guards (Item 2) [Figure 55] to the rear.

**Figure 56**

Rotate guards allowing latch plate (Item 1) to slide on the latch bolt (Item 2) and into the vertical slot (Item 3) [Figure 56] on the latch plate holding the guards open.

**Figure 57**

Release PTO driveline guard latches (Item 1) and disconnect safety chain (Item 2) [Figure 57]. Slide PTO driveline guard away from splitter gearbox.
Figure 58

Remove lock nut (Item 1) [Figure 58] and bolt. Remove driveline from splitter gearbox shaft.

Figure 59

Remove the four 5/16” x 3/4” bolts and flat washers (Item 1). Remove guard plate (Item 2) [Figure 59].

![IMPORTANT]

Fluid such as engine oil, hydraulic fluid, coolants, grease, etc. must be disposed of in an environmentally safe manner. Some regulations require that certain spills and leaks on the ground must be cleaned in a specific manner. See local, state and federal regulations for the correct disposal.

Figure 60

Remove dipstick / vent plug (Item 1) [Figure 60].

Place a collection container under the drain plug (Item 2) [Figure 60]. Remove drain plug and drain the gear oil into the collection container.

Once the oil is drained, install the drain plug.
Add SAE 80W-90 gear oil until oil reaches the dipstick fill line (Item 2). Install and tighten dipstick / vent plug (Item 1) [Figure 61].

The gear oil level should be at the fill line (Item 2) [Figure 61].

Place the dipstick / vent plug (Item 1) [Figure 61] back into the splitter gearbox until the dipstick makes contact with the splitter gearbox. Pull dipstick out and check gear oil level.

Once gear oil reaches the fill line, install and tighten the dipstick / vent plug.

Align the guard plate (Item 1) with the mounting holes on the splitter gearbox. Install and tighten four 5/16” x 3/4” bolts and 5/16” flat washers (Item 2) [Figure 62] through the guard plate and into the splitter gear box.

Slide PTO driveline onto the splitter gearbox shaft. Align PTO driveline and shaft bolt holes. Install bolt and lock nut (Item 1) [Figure 63] and bolt. Tighten until lock nut makes contact with the PTO driveline collar.

Align the guard plate (Item 1) with the mounting holes on the splitter gearbox. Install and tighten four 5/16” x 3/4” bolts and 5/16” flat washers (Item 2) [Figure 62] through the guard plate and into the splitter gear box.

Slide PTO guard over the guard plate. Hook latches (Item 1) to secure the PTO guard to the guard plate. Connect safety chain (Item 2) [Figure 64] to the guard plate.
RIGHT ANGLE GEARBOX

Checking Gear Oil Level

Park the tractor and Rotary Cutter on a flat level surface.

![IMPORTANT]

Allow gear oil to settle into the bottom cavity of the gearbox for approximately 15-20 min. before checking level on dipstick.

**Figure 65**

![Image]

**NOTE:** To get an accurate reading of oil level, do not screw in the dipstick.

Remove dipstick / vent plug (Item 1) [Figure 65].

Wipe the dipstick clean. Place the dipstick back into the gearbox until the dipstick makes contact with the gearbox. Pull dipstick out and check gear oil level.

The gear oil level should be at the fill line (Item 2) [Figure 65].

Add SAE 80W-90 gear oil until oil reaches the dipstick fill line (Item 2). Install and tighten dipstick / vent plug (Item 1) [Figure 65].

Changing Gear Oil

**IMPORTANT**

Replace the gear oil in new gearboxes after first 50 hours of operation. Then replace the gear oil annually.

Park the tractor and Rotary Cutter on a flat level surface.

Leave the operator's position. (See “Leaving The Operator's Position” on page 35.)

**WARNING**

Always wear proper hand and eye protection when servicing the implement.

**IMPORTANT**

Fluid such as engine oil, hydraulic fluid, coolants, grease, etc. must be disposed of in an environmentally safe manner. Some regulations require that certain spills and leaks on the ground must be cleaned in a specific manner. See local, state and federal regulations for the correct disposal.
Place a collection container under the drain plug (Item 1) [Figure 66]. Remove drain plug and drain the gear oil into the collection container.

Once the oil is drained, install the drain plug.

**Figure 67**

**NOTE:** To get an accurate reading of oil level, do not screw in the dipstick.

Remove dipstick / vent plug (Item 1) [Figure 67].

Wipe the dipstick clean. Place the dipstick back into the gearbox until the dipstick makes contact with the gearbox. Pull dipstick out and check gear oil level.

The gear oil level should be at the fill line (Item 2) [Figure 67].

Add SAE 80W-90 gear oil until oil reaches the dipstick fill line (Item 2). Install and tighten dipstick / vent plug (Item 1) [Figure 67].
Enter the tractor, start the engine and engage the tractor’s hydraulics.

Run the tractor engine at low idle. Using the tractor’s hydraulic controls, fully raise the center deck, then fully raise the wings.

Stop the tractor, engage the parking brake and turn the engine off.

Leave the operator’s position. (See “Entering And Leaving The Operator’s Position” on page 35.)

Lock wings in the transport position. (See “Wing Transport Locks” on page 37.)

Engage the frame lock. (See “Frame Lock” on page 36.)

Remove access plug (Item 1) [Figure 68] from the deck (above blades to be replaced).

Rotate the blade pan (Item 1) [Figure 69] until the desired blade hardware is visible through the access hole in the deck.

Install the blade pan locking bracket (Item 2) [Figure 69] over the blade pan and between the blades.

Position the blade pan locking bracket (Item 1) over the support on the under side of the deck. Secure the blade pan locking bracket in place with two 1/2” bolts (Item 2) [Figure 70] and 1/2” nuts.

Remove blade nut by placing wrench through the access hole of the deck. Remove blade bolt and blade.

Align new blade with the mounting hole. Using a hammer, tap the new blade bolt in place (flush against blade pan). Install a new blade nut and tighten to 765 ft-lb (1037 N•m) torque.

Repeat as needed until the desired blades have been replaced.
BLADE PAN

Removal And Installation

**DANGER**

FALLING WING CAN CAUSE SERIOUS INJURY OR DEATH

- Always secure wing transport locks before transporting, servicing, or parking the cutter.
- Stand clear when lowering or raising wings.

**DANGER**

DAMAGED BLADES CAN CAUSE SERIOUS INJURY OR DEATH

- Inspect blades daily for chips, cracks, wear and abnormal bends.
- Do Not modify blades in any way such as sharpening, straightening or welding.
- Replace blades with genuine Farm King blades only.
- Unbalanced blades are dangerous.
- Replace blades in pairs.

**IMPORTANT**

- Inspect blades and blade hardware daily for tightness.
- Tighten blade mounting hardware to 765 ft-lb (1037 N•m) torque.
- Always install new blade mounting hardware every time blades are replaced.

Enter the tractor, start the engine and engage the tractor’s hydraulics.

Run the tractor engine at low idle. Using the tractor’s hydraulic controls, fully raise the center deck, then fully raise the wings.

Stop the tractor, engage the parking brake and turn the engine off.

Leave the operator’s position. (See “Entering And Leaving The Operator’s Position” on page 35.)

Lock wings in the transport position. (See “Wing Transport Locks” on page 37.)

Engage the frame lock. (See “Frame Lock” on page 36.)

Figure 71

Remove access plug (Item 1) [Figure 71] from the deck (above blades to be replaced).
Rotate the blade pan (Item 1) [Figure 72] until the desired blade hardware is visible through the access hole in the deck.

Install the blade pan locking bracket (Item 2) [Figure 72] over the blade pan and between the blades.

Position the blade pan locking bracket (Item 1) over the support on the under side of the deck. Secure the blade pan locking bracket in place with two 1/2” bolts (Item 2) [Figure 73] and 1/2” nuts.

Remove one blade nut by placing wrench through the access hole of the deck. Remove blade bolt and blade.

Remove blade pan locking bracket.

Rotate blade pan the align second blade hardware.

Re-install blade pan locking bracket.

Remove second blade nut, bolt and blade.

Remove blade pan locking bracket and blade pan.

Remove cotter pin (Item 1) and castle nut (Item 2) [Figure 74]. Remove blade pan.

Align new blade pan with the gearbox shaft.

Install castle nut (Item 2) [Figure 74]. Tighten castle nut to 480 ft. lb. (651 N•m) torque.

Install cotter pin (Item 1) [Figure 74].

Re-install blade pan locking bracket.

Align one new blade with the mounting hole. Using a hammer, tap the new blade bolt in place (flush against blade pan). Install a new blade nut and tighten to 765 ft-lb (1037 N•m) torque.

Remove blade pan locking bracket.

Rotate blade pan to align second blade hardware.

Re-install blade pan locking bracket.

Align second new blade with the mounting hole. Using a hammer, tap the new blade bolt in place (flush against blade pan). Install a new blade nut and tighten to 765 ft-lb (1037 N•m) torque.
AXLE

Wheel Bolts Torque

Check the torque on wheel bolts daily. Tighten wheel bolts to 93 ft. lb. (126 N·m) torque.

Tire / Wheel Replacement

WARNING

AVOID INJURY OR DEATH

Before you leave the operator’s position:

• Always park on a flat level surface.
• Place all controls in NEUTRAL.
• Engage the park brake.
• Stop the engine and remove the key.
• Wait for all moving parts to stop.

Park the tractor / equipment on a flat level surface.

Place all controls in neutral, engage the park brake, stop the engine and wait for all moving parts to stop. Leave the operator’s position.

WARNING

AVOID INJURY OR DEATH

• The parking brake must be engaged before leaving the operator’s position. Rollaway can occur because the transmission may not prevent machine movement.
• Always chock tires before performing any maintenance or service.

Place chock blocks behind and in front of the opposite tire to be removed.

Place a jack under the axle frame close to the tire / wheel being replaced. Raise the jack until the tire / wheel is slightly off the ground.

NOTE: Place blocks under the frame to help secure the Rotary Cutter when tire / wheel is raised off the ground.

Remove the five wheel nuts and remove the tire / wheel.

Figure 75

Install the five wheel nuts (Items 1 - 5) [Figure 75].

Tighten wheel bolts in a criss-cross pattern [Figure 75]. Tighten wheel bolts to 93 ft. lb. (126 N·m) of torque.

Wheel Bearings

Inspect and re-pack the wheel bearings annually with a quality SAE multi purpose type grease.

Tire Pressure (Aircraft Type)

When inflating tires, use a clip-on chuck and extension hose long enough to allow you to stand to one side and NOT in front of or over the tire assembly.

Check tire pressure daily. Fill tires to 40 psi (276 kPa).
CLEANING THE ROTARY CUTTER

Fully Clean the Rotary Cutter DAILY:

AVOID COMPONENT DAMAGE

- Remove all debris around and under the PTO drivelines.
- Remove all debris around the gearboxes, blade pans and blades.

SAFETY SIGN (DECAL) INSTALLATION

Procedure

When replacing safety signs (decals), the temperature must be above 10° C (50° F).

- Remove all portions of the damaged safety sign (decal).
- Thoroughly clean the area with glass cleaner. Remove all adhesive residue.
- Allow the area to dry completely before installing the new safety sign (decal).
- Position the safety sign (decal) in the correct location. Remove a small portion of the backing paper on the safety sign (decal).
- Press on the safety sign (decal) where the backing paper has been removed.
- Slowly remove the remaining backing paper, pressing on the safety sign (decal) as the backing paper is removed.
- Using the backing paper, pressing firmly, move the backing paper over the entire safety sign (decal) area.

NOTE: Small air pockets can be pierced with a pin and smoothed out using the piece of the backing paper.
STORAGE AND RETURN TO SERVICE

Storage
Sometimes it may be necessary to store your Farm King Rotary Cutter for an extended period of time. Below is a list of items to perform before storage.

- Thoroughly clean the equipment.
- Lubricate the equipment.
- Inspect the hitch and all welds on the equipment for wear and damage.
- Check for loose hardware, missing guards, or damaged parts.
- Check for damaged or missing safety signs (decals). Replace if necessary.
- Replace worn or damaged parts.
- Touch up all paint nicks and scratches to prevent rusting.
- Store the Rotary Cutter in a clean, dry, sheltered area.
- Place the equipment flat on the ground.

DO NOT permit children to play on or around the stored machine.

Return To Service

After the Farm King Rotary Cutter has been in storage, it is necessary to follow a list of items to return the equipment to service.

- Be sure all shields and guards are in place.
- Lubricate the equipment.
- Inspect and repack wheel bearings with a SAE multi purpose type grease.
- Check that tires / wheels are in good operating condition and wheel nuts are tightened to the proper torque.
- Connect to a tractor and operate equipment, verify all functions operate correctly.
- Check for leaks. Repair as needed.

DO NOT permit children to play on or around the stored machine.

HARDWARE TORQUE VALUES

Metric Chart

NOTE: Do not use the values listed in the charts if a different torque value or tightening procedure is specified in this manual for a specific application. Torque values listed are for general use only.

Use the following charts to determine the correct torque when checking, adjusting or replacing hardware. Torque values are listed in newton-meters (inch* or foot pounds) for normal assembly applications.

Imperial Chart

NOTE: Do not use the values listed in the charts if a different torque value or tightening procedure is specified in this manual for a specific application. Torque values listed are for general use only.

Use the following charts to determine the correct torque when checking, adjusting or replacing hardware. Torque values are listed in newton-meters (inch* or foot pounds) for normal assembly applications.

HYDRAULIC CONNECTION SPECIFICATIONS

O-Ring Fitting (Straight Thread)

Lubricate the O-ring before installing the fitting. Loosen the jam nut and install the fitting. Tighten the jam nut until the washer is tight against the surface.

O-ring Face Seal Connection

Figure 76

When the fitting is tightened, you can feel when the fitting is tight to eliminate leakage caused by under or over torqued fittings. Use petroleum jelly to hold the O-ring in position until the fittings are assembled.

Flare Fitting

Figure 77

Tighten until the nut makes contact with the seat. Use the chart [Figure 77] to find the correct tightness needed.

NOTE: If the fitting leaks, disconnect and inspect the seat area for damage.

NOTE: Port seal and nut, washer and O-ring (O-ring Boss) fittings use the same tightening torque valve chart.

If a torque wrench cannot be used, use the following method.

Tighten the nut until it just makes metal to metal contact, you can feel the resistance.

Tighten the nut with a wrench no more than one hex flat maximum.

Do not over tighten the port seal fitting.

NOTE: If a torque wrench cannot be used, use the hex flat tightening method as an approximate guideline.

NOTE: Port seal fittings are not recommended in all applications. Use O-ring boss fittings in these applications.

---

Tubelines And Hoses

Replace any tubelines that are bent or flattened. They will restrict flow, which will slow hydraulic action and cause heat.

Replace hoses which show signs of wear, damage or weather cracked rubber.

Always use two wrenches when loosening and tightening hose or tubeline fittings.
WARRANTY

BASE LIMITED WARRANTY
Farm King provides this warranty only to original retail purchasers of its products. Farm King warrants to such purchasers that all Farm King manufactured parts and components used and serviced as provided for in the Operator's Manual shall be free from defects in materials and workmanship for a period following delivery to the original retail purchaser of one (1) year. This limited warranty applies only to those parts and components manufactured by Farm King. Parts and components manufactured by others are subject to their manufacturer's warranties, if any.

Farm King will fulfill this limited warranty by, at its option, repairing or replacing any covered part that is defective or is the result of improper workmanship, provided that the part is returned to Farm King within thirty (30) days of the date that such defect or improper workmanship is, or should have been, discovered. Parts must be returned through the selling representative and the buyer must prepay transportation charges.

Farm King will not be responsible for repairs or replacements that are necessitated, in whole or part, by the use of parts not manufactured by or obtained from Farm King. Under no circumstances are component parts warranted against normal wear and tear. There is no warranty on product pump seals, product pump bearings, rubber product hoses, pressure gauges, or other components that require replacement as part of normal maintenance.

REPAIR PARTS LIMITED WARRANTY
Farm King warrants genuine Farm King replacement parts purchased after the expiration of the Farm King Limited Warranty, and used and serviced as provided for in the Operator's Manual, to be free from defects in materials or workmanship for a period of thirty (30) days from the invoice date for the parts. Farm King will fulfill this limited warranty by, at its option, repairing or replacing any covered part that is defective or is the result of improper workmanship, provided that the part is returned to Farm King within thirty (30) days of the date that such defect or improper workmanship is, or should have been, discovered. Such parts must be shipped to the Farm King factory at the purchaser's expense.

WHAT IS NOT COVERED
Under no circumstances does this limited warranty cover any components or parts that have been subject to the following: negligence; alteration or modification not approved by Farm King; misuse; improper storage; lack of reasonable and proper maintenance, service, or repair; normal wear; damage from failure to follow operating instructions; accident; and/or repairs that have been made with parts other than those manufactured, supplied, and/or authorized by Farm King.

AUTHORIZED DEALER AND LABOR COSTS
Repairs eligible for labor under this limited warranty must be made by Farm King or an authorized Farm King dealer. Farm King retains the exclusive discretion to determine whether it will pay labor costs for warranty repairs or replacements, and the amount of such costs that it will pay and the time in which the repairs will be made. If Farm King determines that it will pay labor costs for warranty work, it will do so by issuing a credit to the dealer's or distributor's account. Farm King will not approve or pay invoices sent for repairs that Farm King has not previously approved. Warranty service does not extend the original term of this limited warranty.
Limited Warranty

WARRANTY REQUIREMENTS
To be covered by warranty, each new product must be registered with Farm King within thirty (30) days of delivery to original retail purchaser. If the customer decides to purchase replacement components before the warranty disposition of such components is determined, Farm King will bill the customer for such components and then credit the replacement invoice for those components later determined to be covered by this limited warranty. Any such replacement components that are determined not to be covered by this limited warranty will be subject to the terms of the invoice and shall be paid for by the purchaser.

EXCLUSIVE EFFECT OF WARRANTY AND LIMITATION OF LIABILITY

TO THE EXTENT PERMITTED BY LAW, FARM KING DISCLAIMS ANY WARRANTIES, REPRESENTATIONS, OR PROMISES, EXPRESS OR IMPLIED, AS TO THE QUALITY, PERFORMANCE, OR FREEDOM FROM DEFECT OF THE COMPONENTS AND PARTS COVERED BY THIS WARRANTY AND NOT SPECIFICALLY PROVIDED FOR HEREIN.

TO THE EXTENT PERMITTED BY LAW, FARM KING DISCLAIMS ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ON ITS PRODUCTS COVERED HEREIN, AND DISCLAIMS ANY RELIANCE BY THE PURCHASER ON FARM KING’S SKILL OR JUDGMENT TO SELECT OR FURNISH GOODS FOR ANY PARTICULAR PURPOSE. THE PURCHASER’S ONLY AND EXCLUSIVE REMEDIES IN CONNECTION WITH THE BREACH OR PERFORMANCE OF ANY WARRANTY ON FARM KING’S PRODUCTS ARE THOSE SET FORTH HEREIN. IN NO EVENT SHALL FARM KING BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES (INCLUDING, BY WAY OF EXAMPLE ONLY AND NOT LIMITATION, LOSS OF CROPS, LOSS OF PROFITS OR REVENUE, OTHER COMMERCIAL LOSSES, INCONVENIENCE, OR COST OF REPLACEMENT OF RENTAL EQUIPMENT). IN NO EVENT SHALL FARM KING’S CONTRACT OR WARRANTY LIABILITY EXCEED THE PURCHASE PRICE OF THE PRODUCT. (Note that some states do not allow limitations on how long an implied warranty lasts or the exclusion or limitation of incidental or consequential damages, so the above limitations and exclusion may not apply to you.) This warranty gives you specific legal rights and you may also have other rights, which vary from state to state.

Farm King neither assumes nor authorizes any person or entity, including its selling representatives, to assume any other obligations or liability in connections with the sale of covered equipment, or to make any other warranties, representations, or promises, express or implied, as to the quality, performance, or freedom from defect of the components and parts covered herein. No one is authorized to alter, modify, or enlarge this limited warranty, or its exclusions, limitations and reservations.

Corrections of defects and improper workmanship in the manner, and for the applicable time periods, provided for herein shall constitute fulfillment of all responsibilities of Farm King to the purchaser, and Farm King shall not be liable in negligence, contract, or on any other basis with respect to the subject equipment.

This limited warranty is subject to any existing conditions of supply which may directly affect Farm King’s ability to obtain materials or manufacturer replacement parts.

Buhler Industries Inc. reserves the right to make improvements in design or changes in specifications to its products at anytime, without incurring any obligation to owners of units previously sold.
