Model 2460

Farm King

Liquid application allows you to control your inputs and increase yields. Timely application places nitrogen when it is needed and supplements the nitrogen that was applied last fall.

The asymmetrical tank design features a hopper bottom sump, providing complete tank drainage.

Initial movement is vertical, then a forward rotation to nearly horizontal completes the movement.

› Industry leading in-field ground clearance of 36"

› 1800 and 2400 US gallon tank sizes

CONTROL YOUR NITROGEN. CONTROL YOUR YIELD.
